

Javascript is a programming language that enables you to accomplish more advanced functionality in your survey that would not otherwise be available.

You can change the size of a question text box, add a timer to your survey, customize buttons and more. For a list of useful codes that have already been written, please visit our [Coder's Corner](#).

To access the JavaScript Editor:

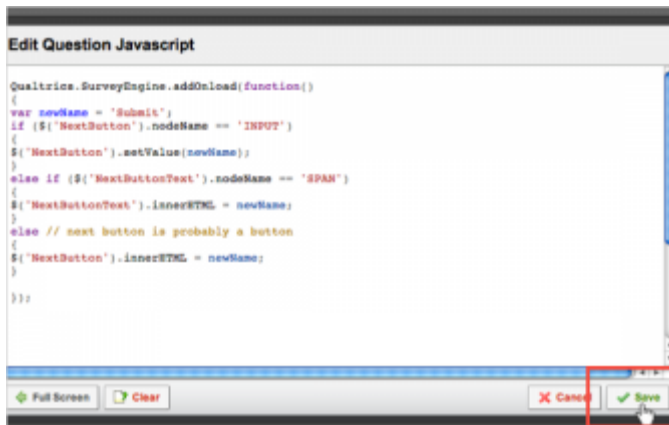

1. Select the question to which you would like to add Javascript.
2. Click the **purple gear box** on the left-hand side of the question.
3. Click **Add Javascript**.

4. Place your Javascript in the box, below the gold text that says **/*Place Your JavaScript Below This Line*/**. You will see that the opening and closing tags are already provided.

- Click **Save** when done. You will now see a Javascript icon on the left-side of the question.

- To preview the changes you have made, click **Preview Survey** in your Edit Survey tab.
- To remove your JavaScript, open the editor and click the **Clear** button and click **Save**.
