1. Difference of two means

Select Stat $\rightarrow$ Basic Statistics $\rightarrow$ 2-Sample t. The 2-sample t window will come up. Click on Samples in one column or Samples in different columns depending on how you entered your data. The default settings are 95% confidence level, difference = 0, and a 2-sided alternative hypothesis. You can change any of these settings by clicking on Options and entering the appropriate values. Click OK.

2. Matched Pairs

Select Stat $\rightarrow$ Basic Statistics $\rightarrow$ Paired t. The Paired t window will come up. Put in the appropriate information. The default settings are the same as above. Click on Options to change any of the settings. Click OK.
