COURSE DESCRIPTION

Day 1 of this course will identify new drug-related problems encountered in the dental practice and outline practical management solutions. Extensive handouts will supplement discussions of intra-oral drug effects and treatment modifications involving medicated or allergic patients. Throughout the program primary emphasis will be placed on developing consistent strategies for treating medically complex dental patients. An extensive and very current handout will greatly enhance the chair side value of this fast-paced, comprehensive and practical course. Day 2 is designed to review & update different treatment options and the proper use of our agents in Oral Medicine. It will focus on the uses of many agents that control, cure, treat, modify, and physically alter problems in the head and neck. It will cover agents and modalities to treat anxiety related syndromes, pain and various infections. A discussion on injection techniques involving the use of Botox and dental fillers will be included.
