

MIDWEST

LIVING ARCHITECTURE SEMINAR

Green Roofs for Healthy Cities and the Southern Illinois University Edwardsville Living Architecture Regional Center of Excellence welcome you to the Midwest Living Architecture Seminar on September 23 at SIUE.

Edwardsville is located in close proximity to many potential green roof markets, including St. Louis, Chicago, Indianapolis, Cincinnati, Louisville, Nashville, Kansas City, and Columbus. This proximity makes it an ideal location to explore how we can improve policy for green roofs and walls across the American Heartland.

This one-day event will feature industry experts and local leaders presenting on green roofs and walls, local standout projects, the importance of strong green roof and wall maintenance, and advanced topics in green roofs and walls such as solar integration, agricultural applications, and more. The Seminar will also feature a trade show for local green roof and wall companies, interactive panel discussions and workshops to help develop policy locally.

Benefits of Attendance:

- Learn about the benefits of green roofs and walls.
- Discuss green roof and wall policy in the Midwest.
- Learn about design, installation, and maintenance best practices in the Southern Illinois/St. Louis area.
- Approved for 7 AIA HSW, ASLA HSW, and GRP CEUs.
- See how to make the business case for green roofs and walls.
